

Name _____ The String Class

- 1) Write a statement that declares a String variable named city. The variable should be initialized so it references an object with the string "San Francisco".
- 2) Assume that stringLength is an int variable. Write a statement that stores that length of the string referenced by the city variable (declared above Question #1) in stringLength.
- 3) Assume that oneChar is a char variable. Write a statement that stores the first character in the string reference by the city variable (declared above Question #1) in oneChar.
- 4) Assume that upperCity is a String reference variable. Write a statement that stores the uppercase equivalent of the string referenced by the city variable (declared above in Question #1) in upperCity.
- 5) Assume that lowerCity is a String reference variable. Write a statement that stores the lowercase equivalent of the string referenced by the city variable (declared above in Question #1) in lowerCity.
