Array Examples WS3
Write a method to do the following

1. Create an array that contains the first 100 odd positive integers

2. An int array []salary contains the integer salary of all employees. Write a method that calculates the average salary. Pass the array as a parameter.

3. A String array contains last names in alphabetical order(String []name). Create an array []reverse that stores the names in decending order.

4. An int array []number contains nonzero integers. Traverse through the array to create 2 more arrays: []pos and neg[].   No zeros should be in []pos or []neg
