PigLatin Translation

Here's how to translate the English word `englishWord` into the Pig Latin word `pigLatinWord`:

a. If there are no vowels in `englishWord`, then `pigLatinWord` is just `englishWord` + "ay". (There are ten vowels: 'a', 'e', 'i', 'o', and 'u', and their uppercase counterparts.)

b. Else, if `englishWord` begins with a vowel, then `pigLatinWord` is just `englishWord` + "way".

c. Otherwise (if `englishWord` has a vowel in it and yet doesn't start with a vowel), then `pigLatinWord` is `end` + `start` + "ay", where `end` and `start` are defined as follows:

   1. Let `start` be all of `englishWord` up to (but not including) its first vowel.

   2. Let `end` be all of `englishWord` from its first vowel on.

   3. But, if `englishWord` is capitalized, then capitalize `end` and "uncapitalize" `start`.
